

*"TOO GOOD TO WASTE"*

## Remote Solutions & Self Service

The BiobiN® FT model has been designed for applications in regions that do not have the infrastructure support required to service the materials recovered by the BiobiN®. These units are being successfully utilised in island communities to efficiently process and recycle their organic waste streams.

### Features and benefits

- ❖ Completely independent stand alone solution
- ❖ Remote power options of either generator or solar PV units
- ❖ The process can be completed within the vessel to produce finished compost
- ❖ Control of leachates
- ❖ Odour control
- ❖ Safe to use, lifter units also available
- ❖ Control of pathogens and disease (bio-security)
- ❖ Ease of operation; and
- ❖ Control of nuisance pests and vermin etc.

Who can use the BiobiN® - Anyone who wishes to separate their organic waste including;

- ❖ Mining Sites
- ❖ Island Resorts & Communities
- ❖ Green Grocers
- ❖ Food Processors
- ❖ Restaurants
- ❖ Shopping Centre food courts
- ❖ National Parks and Holiday resorts; and
- ❖ Agricultural industries

The FT model is designed to be serviced by a single operator with a forklift or similar vehicle. When full, the BiobiN® can be either serviced and contents emptied at a composting site for the completion of the process or, the composting process can be completed in vessel to produce a ready to apply compost straight from the BiobiN®.

BiobiN® can tailor a size to suit you or you can choose from the current options available in the range, the 2.25FT or 3FT. Stainless steel options are available.

BiobiN® can be fitted with several features to make loading of the bins easier. These include wheelie bins loading attachments and foot rails.

Unit Specs	2.25 FT	3.0 FT
Footprint (inc external unit)	3000mm x 1700mm	3600 mm x 1700mm
Net Weight (BiobiN® only)	330 Kg	370 Kg
Gross Weight (BiobiN® only)	1,500 Kg	1,900 Kg
Net organics capacity	1,150 Kg	1,500 Kg

The on site unit displayed is in operation at Warraber Island, far north Queensland, Australia
